Analog Way announces the Secure Power Unit, an innovative new external accessory for select LiveCore™ Switchers

March 2014 – Analog Way is pleased to introduce the Secure Power Unit, an innovative external power accessory compatible with three models of the LiveCore™ series of Premium Switchers.

The **Secure Power Unit (Ref.SPU001)** is a new power protection module designed for the **SmartMatrix Ultra, Ascender 32 and Ascender 48.**

The **Secure Power Unit** features dual power supplies providing redundancy against branch circuit failure or unstable power.

Its battery module provides approximately 10 minutes in case of mains loss, thus offering time to restore power or back up the system.

The **Secure Power Unit** can be managed from the **Web RCS**, the user interface designed for the **LiveCore™** series, offering advanced status monitoring.

This can be achieved by simply connecting an included RS232 cable between the **LiveCore™** device and the **Secure Power Unit.**

The new **Secure Power Unit** will start shipping by late April.

 Analog Way, Pioneer in Analog, Leader in Digital

Analog Way is a leading designer and manufacturer of presentation switchers and image converters with worldwide locations. The company designs a wide range of computer to video scan converters, scalers, seamless switchers and up/down converters. The products provide the most advanced solutions in the Broadcast, AV, Rental & Staging, Church, Corporate and Industrial markets.
