

Analog Way's systems at the 19th Conference of the Argentine Industrial Union

Panoramic display configuration at the 19th Argentine Industrial Union Conference

2MGNET, a Rental & Staging company based in Buenos Aires, Argentina, provided full audio visual services for staging the 19th Conference of the Argentine Industrial Union.

For this event the company used several of **Analog Way's** systems including: 2 x **Di-VentiX II (Ref. DVX8044)**, 2 x **Pulse (Ref. PLS300)** and an **Orchestra (Ref. ORC50)** controller.

The first **Di-VentiX II**, a Hi-Resolution Mixer Seamless Switcher with 4 scalers, was used in Edge Blending mode to feed the main screen (19mx5m). One **Pulse**, **Analog Way's** dual scaler Mixer / Seamless Switcher, was connected to the **Di-VentiX II** and served to feed prompters on stage.

All the content including PowerPoint/Keynote presentations, video, and the CCTV were projected at 1920x1080 on the panoramic edge blended screen with two Barco Data FLM – HD 20 (20.000 ANSI) projectors. The whole configuration was controlled through the **Orchestra** controller.

The second **Di-VentiX II** used in matrix mode served to feed the two side screens (10mx5m). The side screens complemented the main screen to create a huge panoramic display configuration with all contents projected at 1920x1080. The **Di-VentiX II** also served to insert logos and still images on screens. The side screen projectors were two Barco Data HDX – W18 (18,000ANSI).

The second **Pulse** served to feed all the other screens in the room at 1920x1080. This unit was also controlled through the **Orchestra** controller.

Main screen feed by 2 Di-VentiX II units and additional screens by Pulse unit
